Project Name	Courier Management System (CMS)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I want to track my parcel in real-time" • "Delivery is delayed again, no updates" • "I need easy booking and instant receipt" • "I want to know who is my delivery agent"	THINKS • Is my courier safe and on time? • Why is there no transparency in status? • Will I get notification on every update? • Can I trust this courier service?
PERSONA NAME (Optional: User, Target)	
DOES • Checks tracking page multiple times a day • Calls customer support for status updates • Books courier via phone/manual forms • Waits anxiously without status alerts	FEELS • Frustrated due to lack of real-time updates • Anxious about parcel safety and delay • Happy when gets automated SMS/email alerts • Satisfied with transparent CMS tracking
