Project Name	courier management system
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	JMeter, Postman
Type of Testing	Load Testing, API, Stress Testing, Spike Testing
Target Module / API	Cloud / Salesforce Platform - Lightning & API
Test Environment	28 September 2026
Test Date	

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User Login & Registration flow	50	60	All logins successful, <2s response
2	Concurrent Courier Booking	100	120	Bookings processed without error
3	Shipment Real-time Tracking Query	200	180	Tracking data retrieved in <2s
4	Payment Processing with UPI/Card	50	90	100% payment success, no failures

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 sec	Pass	Within target
2	Response Time (Max)	< 5 seconds	2.8 sec	Pass	Excellent
3	Throughput (Req/sec)	150 req/sec	145 req/sec	Pass	Stable throughput
4	Error Rate	< 1%	0.2%	Pass	Very low error
5	CPU Utilization	< 80%	65%	Pass	Efficient
6	Memory Utilization	< 80%	58%	Pass	Optimized

Step 4: Observations & Analysis

Key Findings:

System handles 200 concurrent users efficiently, avg response 1.2s. All modules (booking, tracking, payment) performed under threshold. No server crashes.

Bottlenecks Identified:

Initial shipment query slow due to unindexed SOQL, resolved. Heavy image loading delayed slightly.

Optimization Steps Taken:

Added custom indexes on Tracking Number, implemented caching for tracking API, optimized SOQL queries, enabled CDN for static resources.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]

[JMeter Summary Report - Avg 1.2s, Throughput 145/sec attached]

[Salesforce Performance Graph - CPU 65%, Memory 58% stable]
