

Technology Stack

Date	29 September 2026
Team ID	6ab2a5f7eb88f5d3d45a5044
Project Name	Courier Management System (CMS)
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	Salesforce Lightning UI	Provides a simple and user-friendly interface for managing courier records and shipment details.

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	Salesforce Objects	Automates shipment processing, delivery agent assignment, status updates, and other business processes.
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	Salesforce Objects	Stores customer, shipment, delivery agent, branch, delivery update, and invoice data in a centralized system.
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	Salesforce Cloud Platform	Provides cloud-based access, centralized data management, scalability, and easy deployment.
5	Version Control & CI/CD	Salesforce Deployment Tools	Helps manage and deploy Salesforce configurations and components between environments.

	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	Salesforce Reports & Dashboards	Provides shipment reports, delivery information, performance analysis, and visual dashboards.
