Project Name	Courier Management System
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code - Yes	4-space standard indentation followed in HTML, CSS, and JS files.
2	Proper File Structure	Files and folders are logically organized - Yes	Standard MVC structure with separate folders for <code>/css</code> , <code>/js</code> , <code>/images</code> , and <code>/routes</code> .
3	Meaningful Variable Names	Variables reflect their purpose clearly - Yes	Standard MVC structure with separate folders for <code>/css</code> , <code>/js</code> , <code>/images</code> , and <code>/routes</code> .
4	Function / Method Names	Functions are descriptively named - Yes	Action-oriented names used (e.g., <code>calculateDeliveryFee()</code> , <code>trackPackageStatus()</code>).
5	Code Comments	Inline and block comments explain logic - Yes	Key database queries, API routing logic, and complex functions are well-commented.
6	Modular Design	Code is split into reusable functions/modules - Yes	Database connection, notification delivery, and authentication logic are modularized.
7	No Redundant Code	Duplicate or unused code is removed - Yes	<code>try-catch</code> blocks and user-friendly error messages

			used for invalid tracking IDs or server issues.
--	--	--	---

8 Error Handling Exceptions and errors are handled gracefully

Reusable Components / Modules:

S.No	Component / Module Name	Language / Tech	Where Reused	Reusability Level (High / Medium / Low)
1	Database Connection Manager	Node.js / MySQL	Across all API routes for DB interactions	High

2	Tracking API Service	JavaScript / Express	Admin dashboard, customer portal, and SMS updates	High
3	Notification Module (SMS/Email)	Node.js (Nodemailer/Twilio)	Booking confirmation, status updates, and delivery alerts	High
4	Input Validation Utility	JavaScript	Booking forms, login page, and feedback submission	Medium
5	Header & Navigation Bar	HTML / CSS	All main web portal pages	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5/5	Files are systematically organized with clear separation of concerns (frontend, backend, database).
Readability	4/5	Clean coding style with self-explanatory variable and function names.
Reusability	5/5	Core services like notifications, database connections, and tracking APIs are highly modular.
Documentation / Comments	4/5	Proper function comments and inline documentation provided throughout the modules.
Overall Score	4.5/5	Well-structured, readable, and maintainable codebase ready for deployment.
