Project Proposal (Proposed Solution) report

The proposal aims to develop a **Courier Management System** to simplify and manage courier booking, tracking, delivery, and customer information. It addresses common difficulties in manual courier management by providing a centralized system for efficient booking, tracking, and delivery status management.

Project Overview	
Objective	The primary objective is to develop an efficient courier management system that allows customers to book and track couriers while helping administrators and delivery staff manage courier and delivery information effectively.
Scope	The project covers customer registration, courier booking, courier tracking, delivery status management, customer information management, and feedback. It provides a centralized platform for managing courier-related activities.
Problem Statement	
Description	Traditional or manual courier management can make it difficult to maintain booking details, track parcels, update delivery status, and provide timely information to customers.
Impact	Solving these issues will improve courier management efficiency, reduce manual work, provide better tracking visibility, and improve customer satisfaction.
Proposed Solution	
Approach	The proposed system provides a centralized digital platform to manage courier bookings, customer details, tracking information, delivery status, and feedback.

Key Features	Customer registration and login. Courier booking with sender, receiver, and parcel details. Unique tracking ID for each courier. Courier tracking and delivery status updates. Admin and delivery staff management. Customer feedback and rating.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computer/Laptop used for development	T4 GPU
Memory	RAM required for development	8 GB
Storage	Storage for project files and database	1 TB SSD
Software		
FrameworksTechnologies used to develop the system		
Libraries Supporting libraries for the system interface		
Development Environment Tools used for coding and running the application		

Data	Data required for the courier management system	Customer details, courier details, booking details, tracking details and delivery status
